

Brooks Parrish Bio:

Hello my name is Brooks Parrish and I am a third-year undergraduate student at the University of Florida. I am currently majoring in plant science in the College of Agricultural and Life Sciences. The produce industry has made a major impact on my life as I have grown up working on my family's farm where we primarily grow watermelons. My interests in plants and biotechnology have lead me to the university where I am conducting undergraduate research using tissue culture to micropropagate disease eradicated plants. When I am not in the lab I enjoy hunting, running, and watching college football. I am seeking a graduate program to continue my education to learn more about the tissue culture industry and how it is impacting agriculture. Following college, I hope to obtain a career conducting research and development using plant tissue culture.
